Introduction

□ Background:

This dataset includes crimes like Burglary, Robbery, Vehicle & Traffic Laws reported to the New York City Police Department (NYPD) for all complete quarters so far this year (2017). Offenses occurring at intersections are represented at the Latitude & Longitude of the intersection. Crimes occurring anywhere other than an intersection are geo-located to the middle of the block.

We have completed the following tasks:

- Cleanse the data
- Create a conceptual model of the data
- Create a dimensional model
- Analyze the data quality
- ETL
- Create a data quality scorecard
- Create visualizations to showcase the data

Field Names

| Column | Description |
|------------------|--|
| CMPLNT_NUM | Randomly generated persistent ID for each complaint |
| CMPLNT_FR_DT | Exact date of occurrence for the reported event (or starting date of occurrence, if CMPLNT_TO_DT exists) |
| CMPLNT_FR_TM | Exact time of occurrence for the reported event (or starting time of occurrence, if CMPLNT_TO_TM exists) |
| RPT_DT | Date event was reported to police |
| KY_CD | Three digit offense classification code |
| PD_CD | Three digit internal classification code (more granular than Key Code) |
| PD_DESC | Description of internal classification corresponding with PD code |
| CRM_ATPT_CPTD_CD | Indicator of whether crime was successfully completed or attempted |
| JURIS_DESC | Jurisdiction responsible for incident. Either internal or external |
| BORO_NM | The name of the borough in which the incident occurred |
| Latitude | Latitude coordinate for Global Coordinate System, WGS 1984, decimal degrees (EPSG 4326) |
| Longitude | Longitude coordinate for Global Coordinate System, WGS 1984, decimal degrees (EPSG 4326) |

The screenshot shows a SQL query result window titled 'SQL File 4*'. The query is 'select * from d_pd_cd'. The result is displayed in a table with columns D_PD_CD_KEY, D_PD_CD, and D_PD_DESC. The table contains 21 rows of data, showing various crime types and their corresponding keys and descriptions.

MySQL to Tableau Connection

The screenshot displays the Tableau Desktop interface for a MySQL connection. On the left sidebar, the 'Connections' pane shows 'localhost MySQL' as the selected connection. Below it, the 'Database' dropdown is set to 'final_project_nov_29'. The 'Table' pane lists several tables: 'd_juris', 'd_offense', 'd_pd_cd', 'd_rpt_dt', and 'fact_location'. The main workspace shows a data model where the 'fact_location' table is connected to four dimension tables: 'd_juris', 'd_offense', 'd_pd_cd', and 'd_rpt_dt'. Each connection is represented by a double-circle icon. At the top right, the 'Connection' type is set to 'Live'. The bottom status bar includes options for 'Show all fields', 'Data source order', 'Show aliases', and 'Show hidden fields'.

Recommendations

- ❖ Currently, approximate locations are being captured by latitudes & longitudes. We recommend that additional information such as block number and street names also be captured to provide more accurate crime locations
- ❖ Our data shows that Brooklyn has higher crime rates than Staten Island, but this does not mean Staten Island is safer than Brooklyn because we have looked at the NYPD complaints data only and not at other factors such as population density, average income levels & employment rate
